## Objectives and Investment Policy

The investment objective of the VT Tyndall North American Fund is to achieve capital growth over the long term (5 years).

The Sub-Fund will aim to meet its objectives by investing at least 70% in North American (US and Canadian) equities. The Sub-Fund may also invest in other transferable securities (such as bonds), collective investment schemes (which may include those managed and/or advised by the ACD or Investment manager), money market instruments, deposits, cash and near cash.

Derivatives (that is sophisticated investment instruments linked to the rise and fall of the price of other assets) may be used for efficient portfolio management purposes including hedging (although it is expected that use of derivatives will be limited).

There is no particular emphasis on any industry or economic sector.

Derivatives (that is sophisticated investment instruments lined to the rise and fall of the price of other assets) may be used to manage the Fund more efficiently.

The Fund has the discretion to invest in a range of investments as described above.

If you hold income shares any income from the Fund may be paid out to you.

If you hold accumulation shares, any income from the Fund will be re-invested to grow the value of your investment.

## Risk and Reward Profile

The Risk and Reward Indicator table demonstrates where the Fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the Fund. The shaded area of the table below shows where the Fund ranks in terms of its potential risk and reward based on historical data.

Historical data may not be a reliable indicator of the Fund's future risk profile. The risk category shown is not guaranteed and may change over time. The lowest category does not mean "risk free".

The Fund is ranked 6 because monthly historical performance data indicates that significant rises and falls in market prices would have occurred historically.

The following risks are material in addition to the risks captured by the indicator above:

- **Counterparty risk:** The Fund can conclude various transactions with contractual partners. If a contractual partner becomes insolvent, it can no longer or can only partly settle unpaid debts owed to the Fund.
- **Market Risk:** External factors can cause an entire asset class to decline in value which would result in a decrease in the value of investments.
- **Currency Risk:** As the Fund may invest in overseas securities, movements in exchange rates may, when not hedged, cause the value of your investment to increase or decrease. Currency hedging techniques applied to hedged Share Classes may not entirely eliminate the effects of changes in exchange rates, therefore it cannot be guaranteed that the hedging objective will be achieved.
- **Risk from use of derivatives:** Investment in derivatives may result in gains or losses that are greater than the original amount invested.

For full details of the Fund's risks, please see the prospectus which may be obtained from the address in 'Practical Information' overleaf.
